

UVOD:

Korišćeni programski jezici: HTML, CSS, JavaScript, JQuery, AJAX, ASP.NET

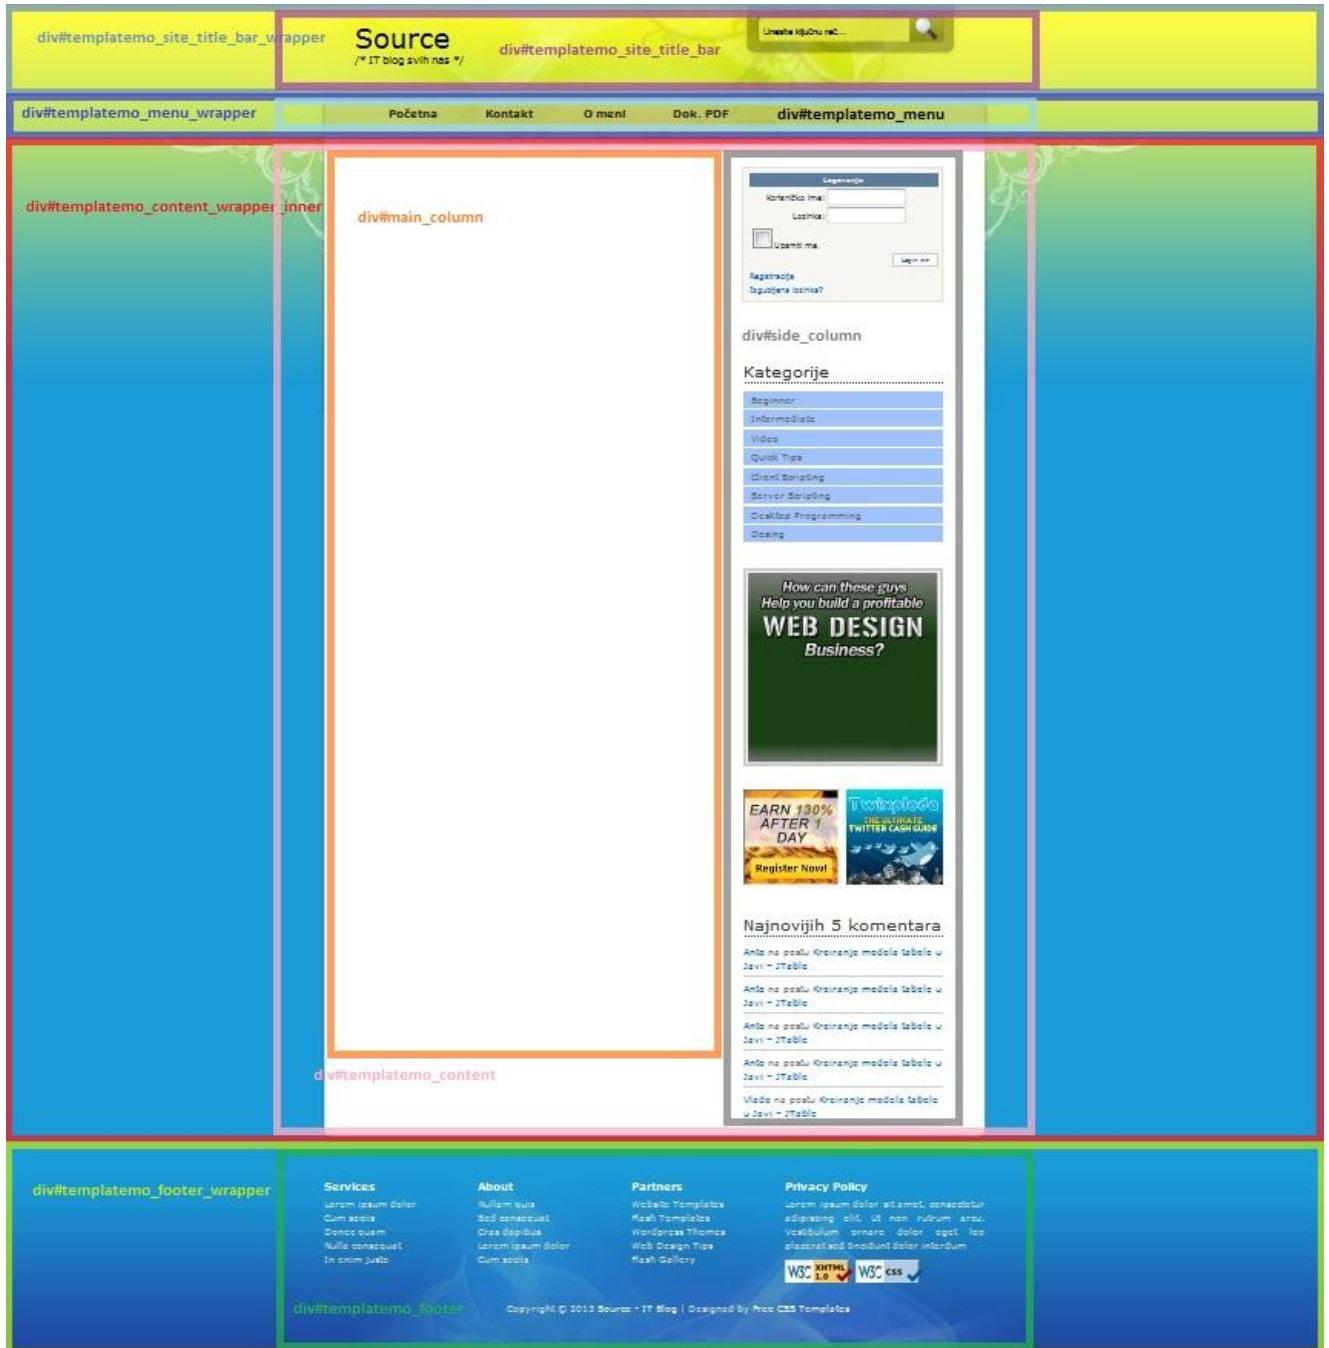

Baza podataka: sql server 2008

JavaScript biblioteke: jquery.lightbox-0.5, jquery-latest, jquery – 1.9.1.min

Sajt sadrži sledeće funkcionalnosti: *lightbox* (na strani detaljnije.aspx, gde se prikazuje ceo sadržaj nekog posta (ako post sadrži slike klikom na istu otvara se lightbox)), *kontakt formu* (na stranici kontakt.aspx sa proverom unešenih podataka regularnim izrazima i na klijentskoj i na serverskoj strani sa slanjem e-maila na sourcekontakt@gmail.com), *stranicu o autoru* (omeni.aspx), *straničenje* (na stranama index.aspx i rezultat.aspx gde je prikaz po strani četiri posta), *galeriju sa putanjama slika iz baze* (realizovanu na strani detaljnije.aspx kod prikaza celokupnog posta, na detaljnije.aspx strani je realizovano i ostavljanje komentara na postu), *pretragu sajta* (pretraga se vrši po naslovu posta, takođe je omogućeno filtriranje postova po kategoriji kojoj pripadaju i autorima), *logovanje uz registraciju* (korišćene gotove “asp-ovske” kontrole, kada se korisnik registruje automatski mu se dodeljuje uloga korisnika. Admin je u mogućnosti da određene korisnike prebaci u ulogu autora), *anketa sa ajax-om* (nalazi se na index.aspx strani, anketa pravi kolačić kada se izvrši glasanje i upisuje se ip adresa u bazu podataka sa koje je korisnik glasao (ako se kolačić izbriše glasanje je ponovo omogućeno)), *dinamički meni iz baze*.

Administracija sajta je urađena po datom kriterijumu (dinamičko dodavanje novog linka i nove stranice, dinamičko dodavanje, brisanje i editovanje sadržaja na sajtu (omogućeno za postove), dodavanje nove ankete, brisanje, modifikacija postojeće ankete).

Objektno orijentisani JavaScript – osnovi koje svaki frontend developer mora znati

Datum: 10.08.2012. **Autor:** Milan Stojanov **Komentara:** 0

JavaScript je skriptni jezik koji je implementirao nekoliko standardnih programskih paradigmi. Svi se složili da je to pročišćen i funkcionalan jezik, ali mnogi osporavaju da je to i objektno-orijentisani jezik. Iako je gotovo...

NetBeans kurs #2: Kreiranje Top Componenta

Datum:04.03.2013.

Autor:Mrša

Komponenta:4

Uvod u NetBeansov Top Component

Pošto smo objasnili osnovne koncepte NetBeans inženjeringa, možemo da prodjemo na zanimljiviji deo, tj. GUI (Graphical User Interface). Za ovaj tutorijal, neophodno je osnovno poznavanje Swing GUI. Za razliku od Java, i korišćenja JFrame kao osnovnog prozora, NetBeans uvodi koncept TopComponent. Verovatno ili ne, skloni se svađaće sa njim - pešev od Visualiziranih prozora koji radi na sličnom principu, sa preko tihakulinskih editora itd. Jednostavno rečeno TopComponent je proširba unutar vašeg projekta, koji se, laički rečeno, lapi na određeni vivat, tačnije na određeni projekt. Uzmimo za primer projekt Neuroph (Studio sa Neuronick mreže).

Iako i sami možete da zaključite koliko ovde "zakopljani" proširba ima, verovatno se znate - saže konio takvu implementaciju a na JFrame. Zamislite da u ovom projektu postoji 4 nezavisna JFrame proširba koje ispraju po vašem diskretu - to bi ukupno zališlo na avo, samo na na projekt. NetBeansov TopComponent omogućava lapiš ukladjenost i mogućnost privlačenja sa jedno pozicije na druge. Ali budite opretni i ne dozvolite da vas ispiše savara. Postoje, kao i dizajn sa moguće iako kaostimizovati, što možemo vrlo lako videti na Blue Marine projektu.

Kao što vidite, dizajn i pozicije su veoma dobro određene, ali nemojte da mislite da je sa ovo potrebno veliko znanje - što više sačuvanje je uz malu pomoć Googlea.
